

Milton Road Vision

We want our children to be happy and healthy today, fulfilled in the future and able to make their world an even better place.

In Science we will do this by nurturing inquisitive minds that not only understand the principles of Science but also embrace the joy of unravelling its mysteries

As Scientists at MRPS we are...

Searching explorers
Curious investigators
Interested researchers
Environmentally aware
Naturally inquisitive
Creative problem solvers
Eager Observers

Our Principles

We have opportunities to *share our understanding*, our ideas and our opinions.

We can *discuss* 'What if..?' and 'Why not..?'.

We *ask questions* and we use our *scientific skills* to find out the answers for ourselves.

We record and analyse our findings scientifically.

We carry out *practical investigations*, choosing *suitable scientific equipment* and using it correctly.

We cover a *range of scientific skills* throughout the year, building on them each time and self-assessing our progress.

We link our Science learning to the real world - we make connections with what we have learnt before and with our own experiences of the world around us.
